IABSE Denmark

Invitation

Mini seminar – Bridge Aesthetics: Collaboration between Architect and Engineer

Thursday 26 October 2017, 15:00 – 19:30
COWI, Parallelvej 2, 2800 Kongens Lyngby

The seminar aims at presenting and discussing collaboration between architect and engineer in bridge design. The Danish bridge building tradition is rich on examples of successful designs developed and delivered in collaboration between owners, architects, consultants and contractors. Technological development has introduced a number of new tools that support the process and has taken visualisation to a new level. The presentations will generally be in English.

The Great Belt East Bridge
